Java

```java
class Solution {
  public long repairCars(int[] ranks, int cars) {

  }
}
```

JavaScript

```javascript
/**
 * @param {number[]} ranks
 * @param {number} cars
 * @return {number}
 */
var repairCars = function(ranks, cars) {

};
```

TypeScript

```typescript
function repairCars(ranks: number[], cars: number): number {

};
```

C++

```cpp
class Solution {
```

```
public:
  long long repairCars(vector<int>& ranks, int cars) {

  }
};
```

C#

```
public class Solution {
  public long RepairCars(int[] ranks, int cars) {

  }
}
```

Kotlin

```
class Solution {
  fun repairCars(ranks: IntArray, cars: Int): Long {

  }
}
```

Go

```
func repairCars(ranks []int, cars int) int64 {

}
```
